Project Title: Mars Website

This would be a one stop shop about the most basic information that you could learn about mars. I'd like to build this site as single page website that scrolls down. The typical site navigation would be an arrow that points down that goes to next section and then a hamburger section at the top left to go to any section. I think there is plenty of content and photography to build out all the p

- **Home Page/Overview** – Give basic information about mars that isn't so detailed "Mars is the 4th planet…". The information that comes at the beginning of the Wikipedia site.

- **Orbit and Rotation** - Give basic information about the orbit and have a graphic that shows how the planet orbits the sun compared to the earth.

- **Atmosphere –** I would make this a page that shows all of the elements that make up mars and underneath each of the element symbols the percentage that each element composes of mars atmospheres.

- **Climate**- I would make this a page that would show mars in the middle of it and then on the side have information of the climate and maybe on the right side a thermometer that just shows how cold it is on mars or maybe just a large text of the temperature.

- **Moons –** Give information about the two moons and small information about each moon underneath the respective one.

- **Sources** – this page will just list sources, including the Wikipedia page, as well as other sources for photography, and any other credits that need to be provided.
